

Pax Flex U

Electric towel rail with pivoting arms

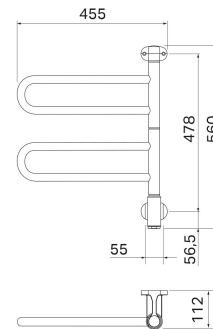

Article no. 24-1014
 EAN 7350020410147

Flex U has excellent drying properties. The individually pivoting, U-shaped arms allow the towels to hang with space in between when necessary. The rail's construction is very stable, with metal brackets. It is available in several different varieties. When combined with accessories such as shelves and knobs, we're convinced that there is a Flex U to suit everyone. • Low energy consumption – from only 28W • High-quality feel and surface finish. • Built-in electric heating cable. • Smart, separate connection box for simple electrical connection/towel rail docking. • Hidden electrical connection (cable for surface installation is available as an accessory). Also available with Memento timer.

Specifications

Designation	Pax Flex U 2/450
Colour/Finish	Chrome
Material	Steel
Width [mm]	455
Height [mm]	560
Depth [mm]	112
Weight [kg]	3
Multi-pole Switch	Built-in light
Power consumption	28W
Voltage/Frequency	230V AC 50Hz
IP code	IP44 (zone 1)
Insulation class	Class II must not be protectively earthed
Certificate	Intertek S Mark
Labels	CE
Heating	Electric, heating cable
Connection	Hidden
Cable/plug	Accessories
Electrical installation	Note: All permanent electrical installation work must be done by a qualified electrician.

Description

Imagine always having a warm, dry and pleasant towel to dry yourself with after your shower. If you've ever experienced the feeling of a warm towel, you'll know exactly what we mean. Your towels will also benefit from rapidly drying on a Pax towel rail. There's less risk of them becoming "stale" and smelling unpleasant, and you won't need to wash them as often. Towel rail – for a better indoor environment. The heat in Pax towel rails contributes to air currents in the bathroom. This is particularly important during the

summer when humidity is at its highest and underfloor heating is normally switched off. A Pax towel rail in combination with active ventilation contributes to creating a good air climate and reduces the risk of mould. A good climate in the bathroom is beneficial for both residents and buildings.

WallFix™

WallFix™ – the smart, separate connection box Permanent (hidden) electrical connection: With the smart, separate Pax WallFix™ connection box, it's easy to connect electricity. Screw the connection box to the wall, connect the electricity and then dock the towel rail. The connection box has plenty of space and electricity is connected via a terminal block. Note: All permanent electrical work must be done by a qualified electrician. Cable, sold separately: A cable (1.5 m) with plug is available as an accessory for connection to an electric socket. Note: Only a qualified electrician may install the cable on Pax towel rails.
