Description

Imagine always having a warm, dry and pleasant towel to dry yourself with after your shower. If you've ever experienced the feeling of a warm towel, you'll know exactly what we mean. Your towels will also benefit from rapidly drying on a Pax towel rail. There's less risk of them becoming "stale" and smelling unpleasant, and you won't need to wash them as often. Towel rail – for a better indoor environment. The heat in Pax towel rails contributes to air currents in the bathroom. This is particularly important during the

summer when humidity is at its highest and underfloor heating is normally switched off. A Pax towel rail in combination with active ventilation contributes to creating a good air climate and reduces the risk of mould. A good climate in the bathroom is beneficial for both residents and buildings.
